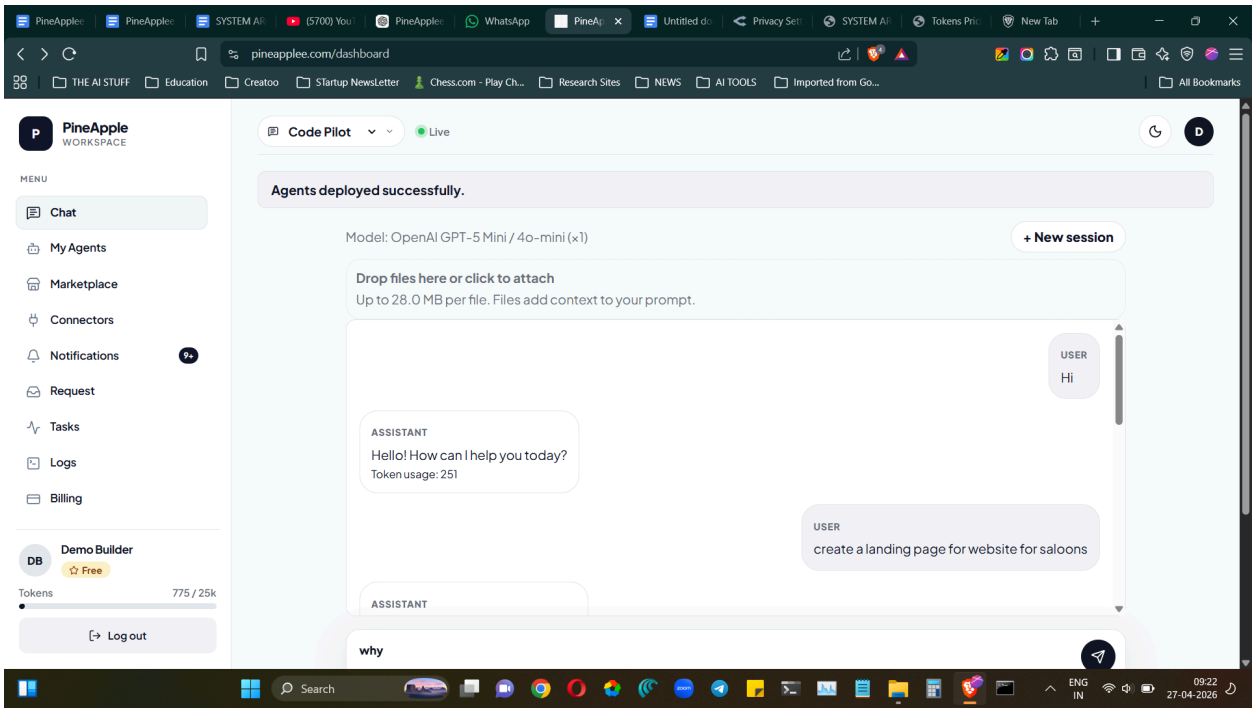
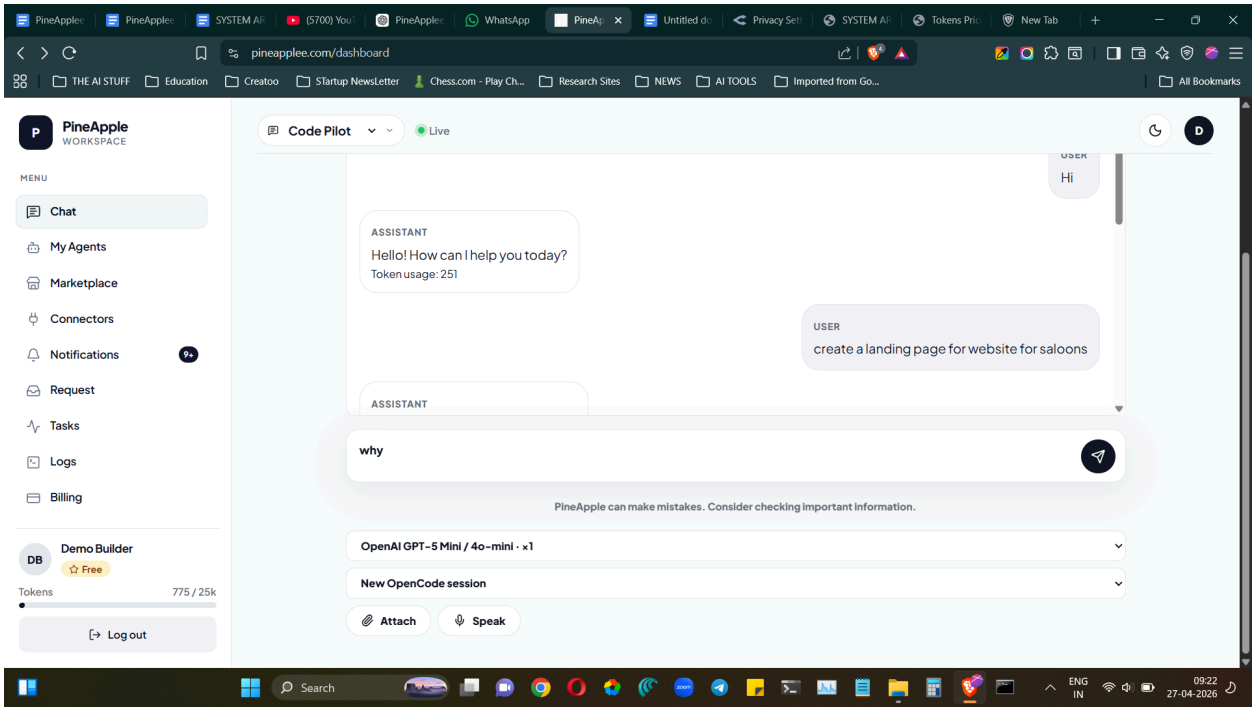
Improvements:

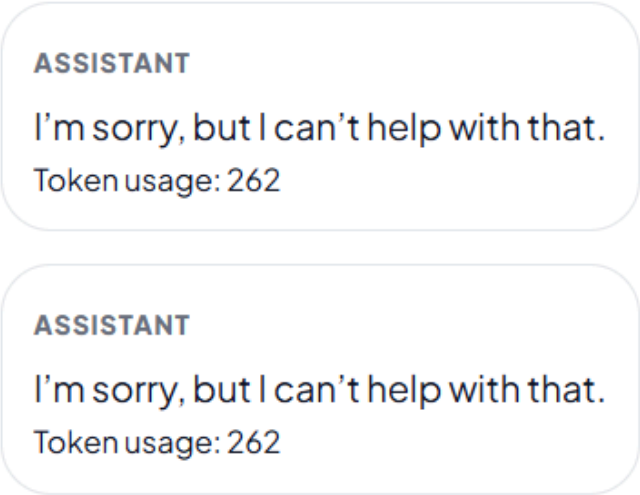




Please take a look with the reference that i have shared in the doc, both the docs, like we should be having a single chat window with an input box, where the user can upload the files via a pin icon on the left, and change models from the system from right side before to send button. Even if we use speak to text option, please see how Google Gemini, Grok, Chat GPT have

those options, like its not like they are scattered here and there, its all in the input section, so please make sure the things are like that.

The Dark theme is not up to mark, its not good and not looking good when turned on, everything turned black and white / gray with no differentiations in it.



We don't want it this much, I have shared a reference that please look into the system how Claude and other AI model's chat window are working, the alignment, the font, the whole system is not working properly at this point.

THE FONT OF THE WHOLE CHAT WINDOW NEEDS TO BE CHANGED AS WELL AS THE UI UX, its not up to the mark, I have shared specifically the snapshots for that so please make sure the design wont get compromised any how.

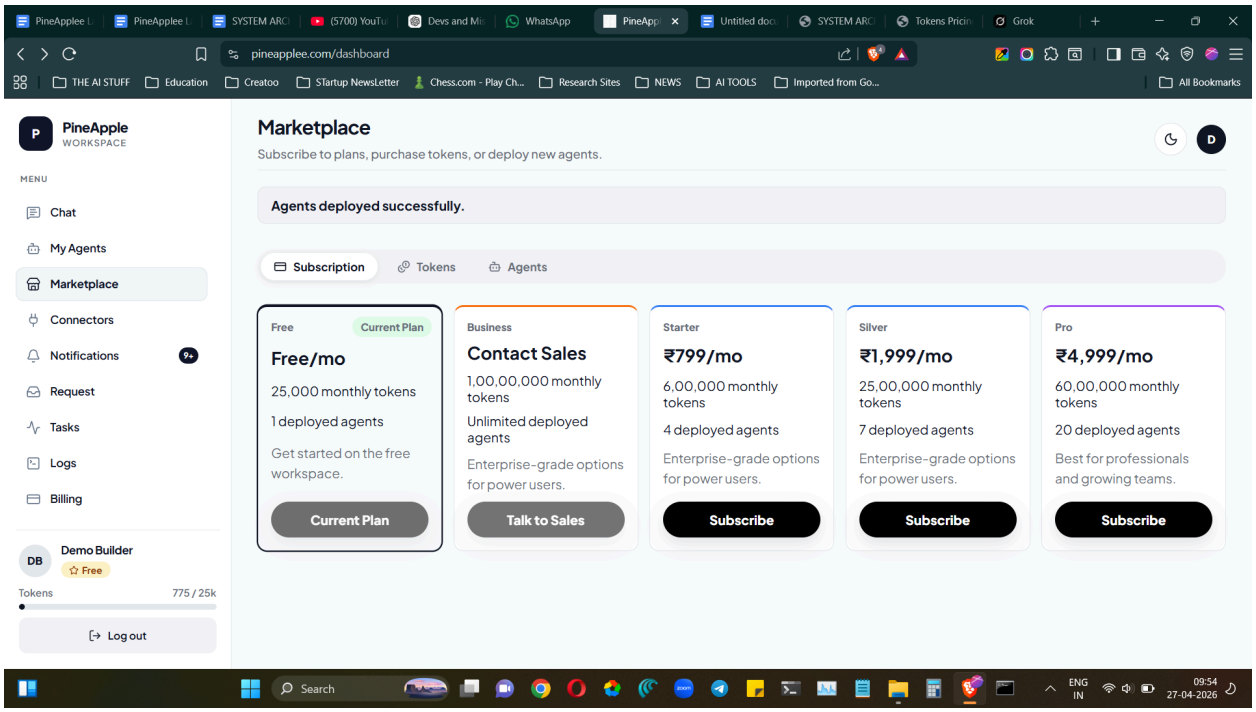
When started the dark theme, first thing is the dark theme is not good, its not looking good, dark theme dosent mean only black all around, its the balance of Black, white, gray color theme, its all same color all around. Please make sure the quality dont get compromised.

When tapped on dark theme, it working good, but when tried to switch back to light theme, we need to tap the button twice to get back to light theme.

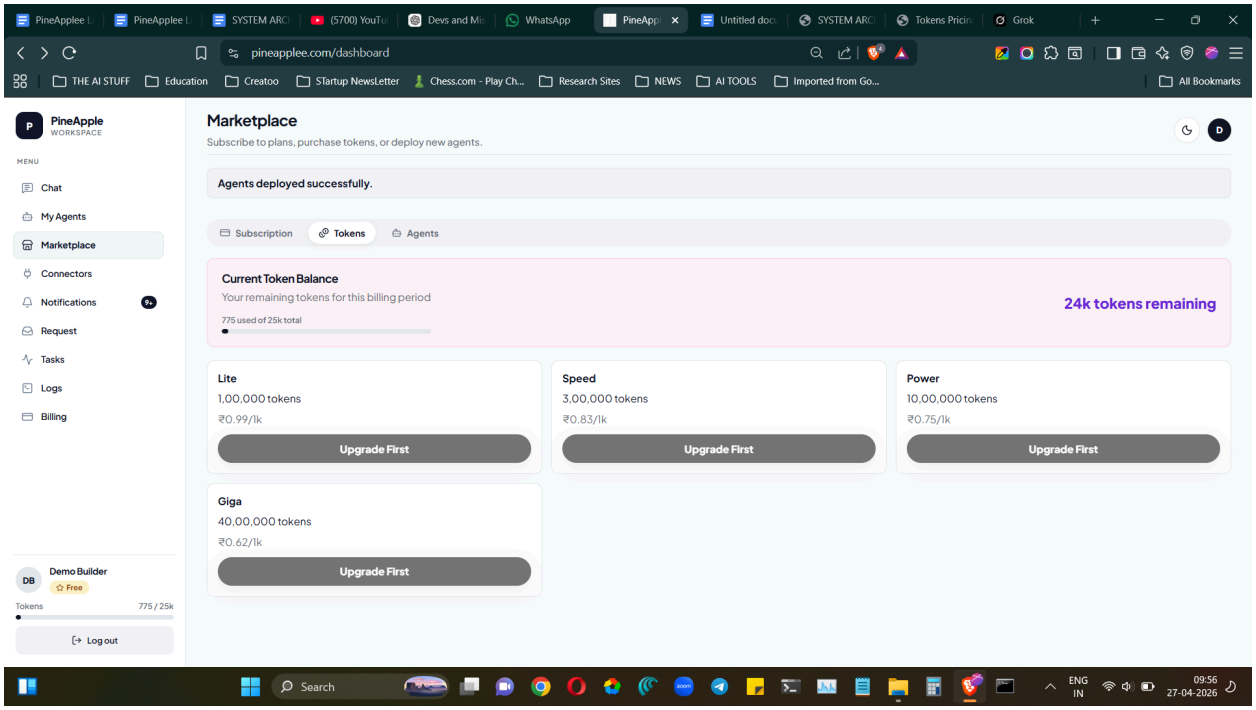
FROM SIDEBAR,
It should be only: Chat, My Agents, Marketplace, Connectors, Notifications, Requests, Tasks

In the left bottom, it should have a token balance progress bar and Profile section with an up ward arrow, which have those other options like: My Profile (this is missing here), Logs, Billings, Live Status. These would be under My Profile not in any other thing not on the sidebar.

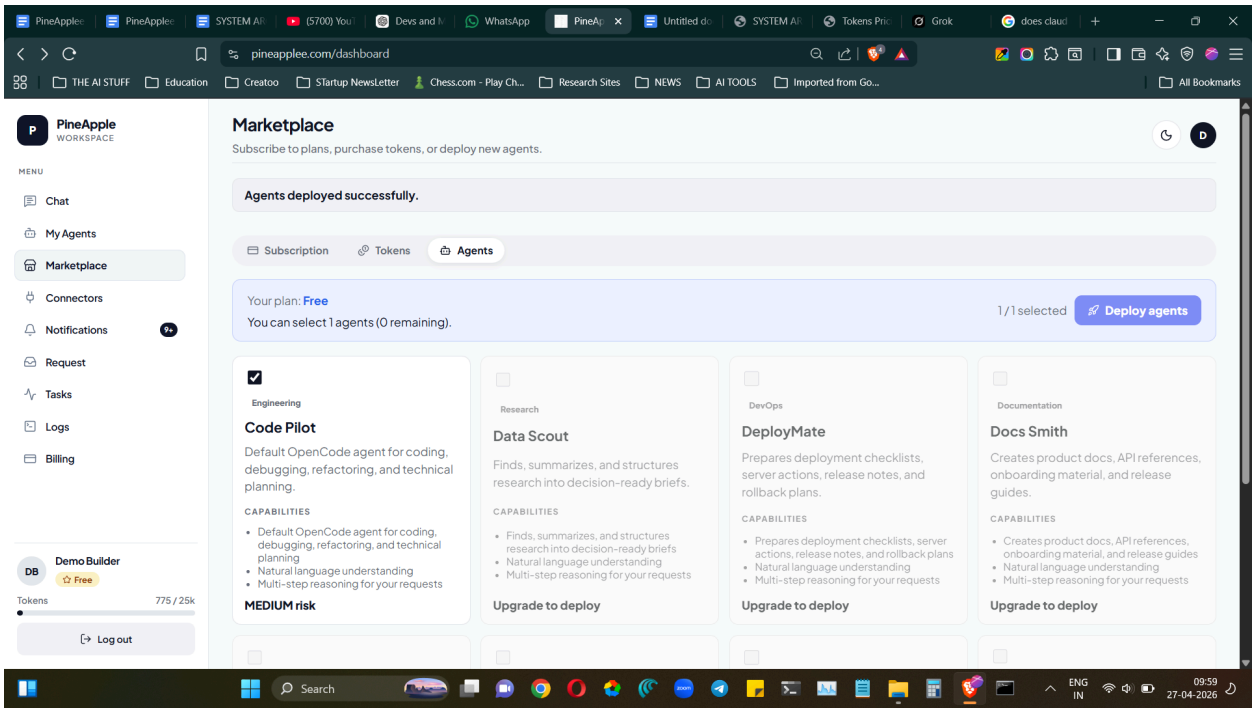
My Agents Section: see page 28, the UI would need improvements and at the bottom it would be having a button as “Chat” where when tapped it would be directly navigate to Agent for chatting or task that is to be performed. UI and font needs way improvements, its not looking professional.



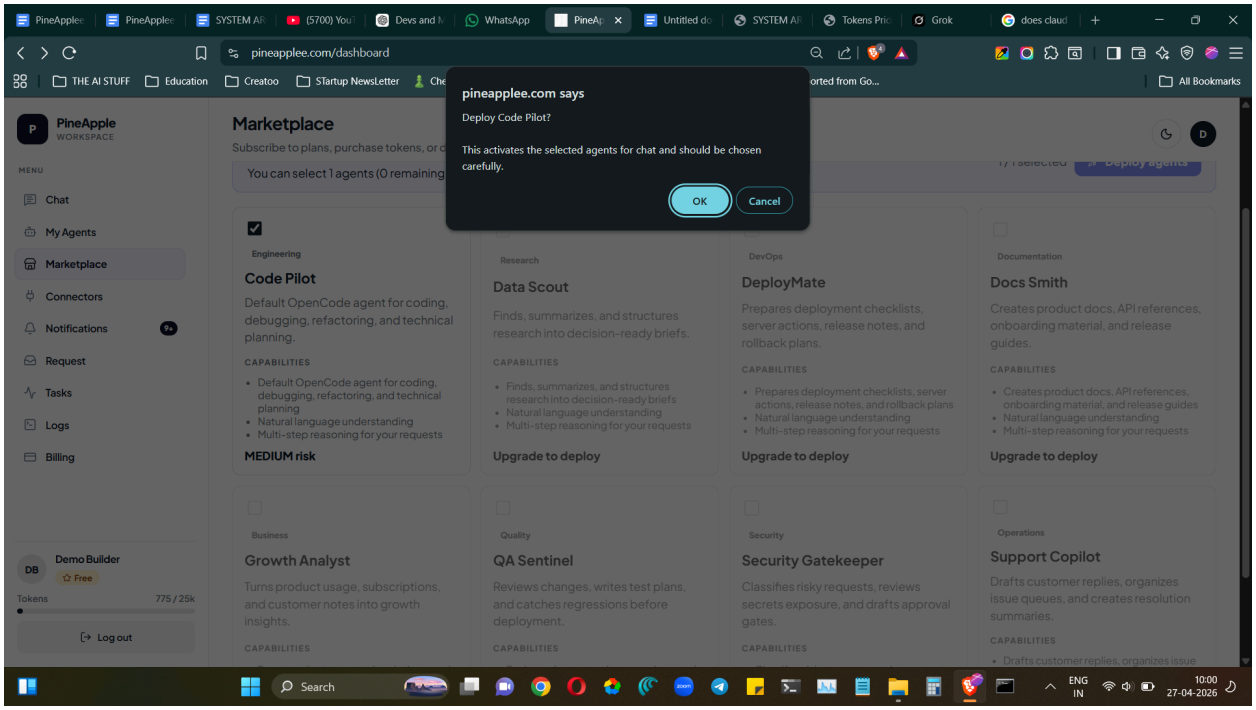
Please refer to page 29 of the doc that i have shared, the tile the UI would be more enhanced for this, this thing wont work, and see the UI how it is done in the snapshot in the previous doc, we are making a professional dashboard, so we need to follow the UI UX the theme and other working of this, so please make sure the quality wont get degraded.



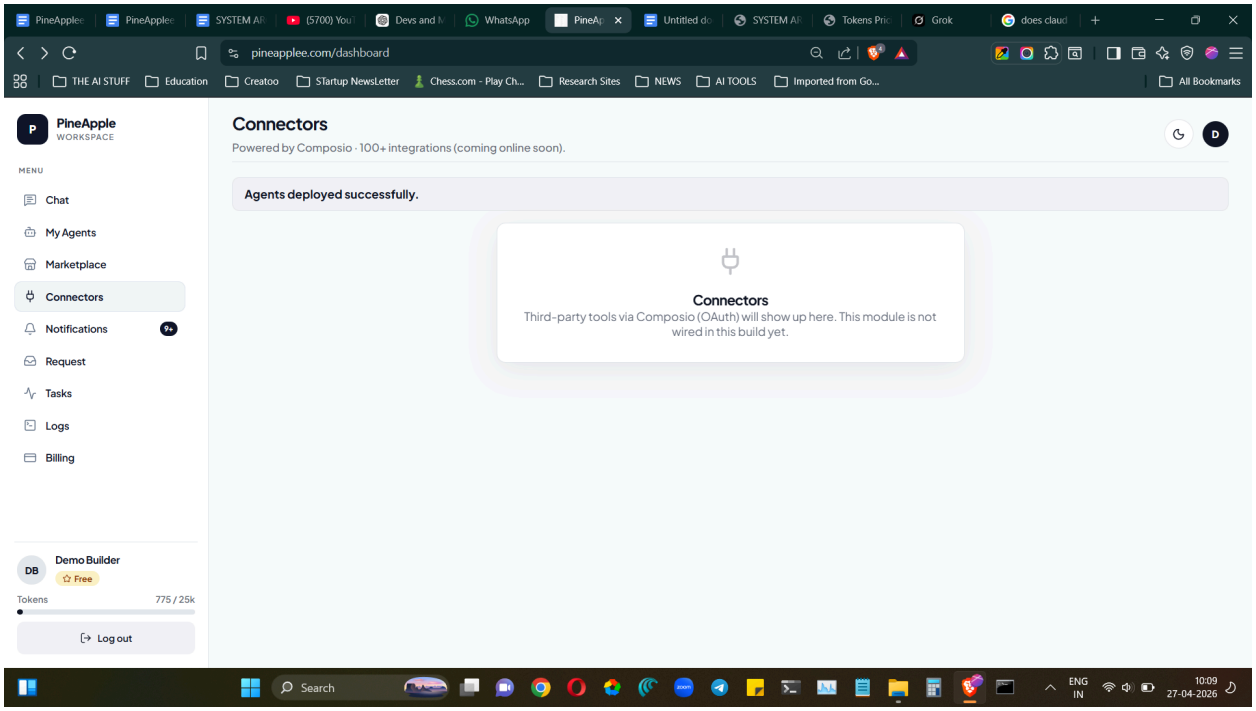
I have clearly mentioned the pricings of these tokens, then why we are not adhering to the requirements that has been shared. Still again the UI is not up to the mark, the tokens pack needs to be more creative, more attractive and rich user phase.



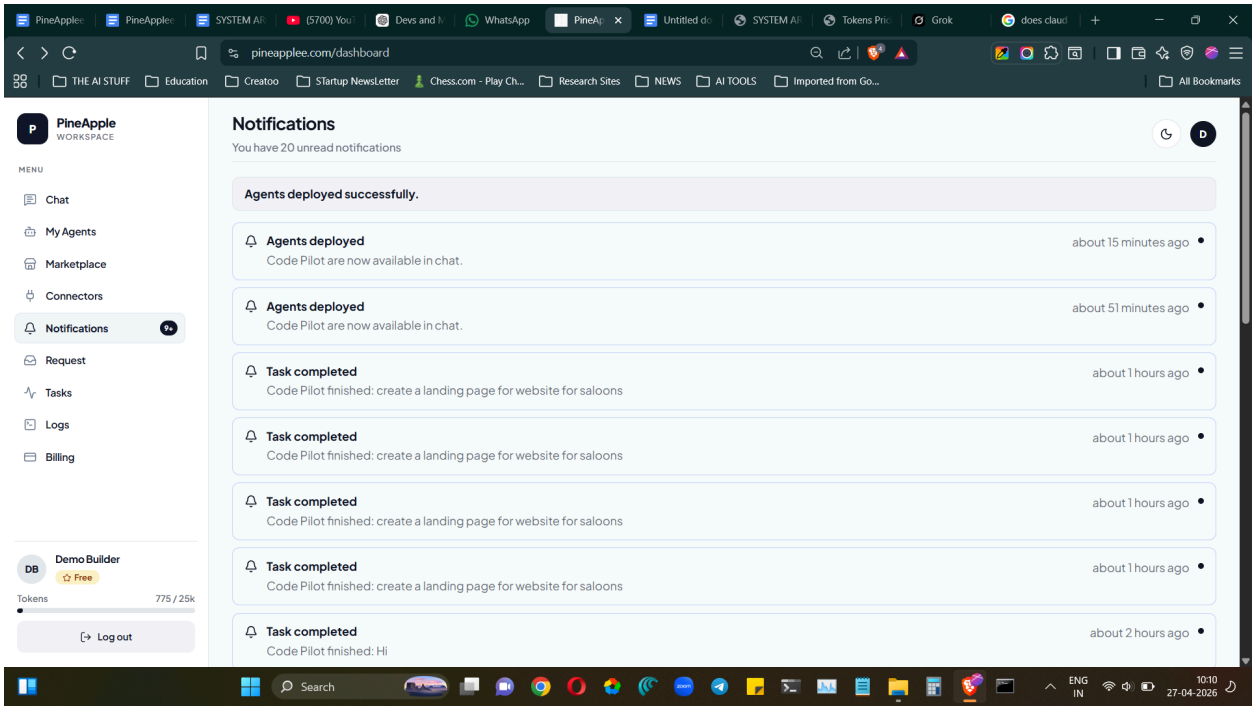
UI Needs improvements and the deploy button also gets light when its say deploy, how can someone would understand that weather its working or not



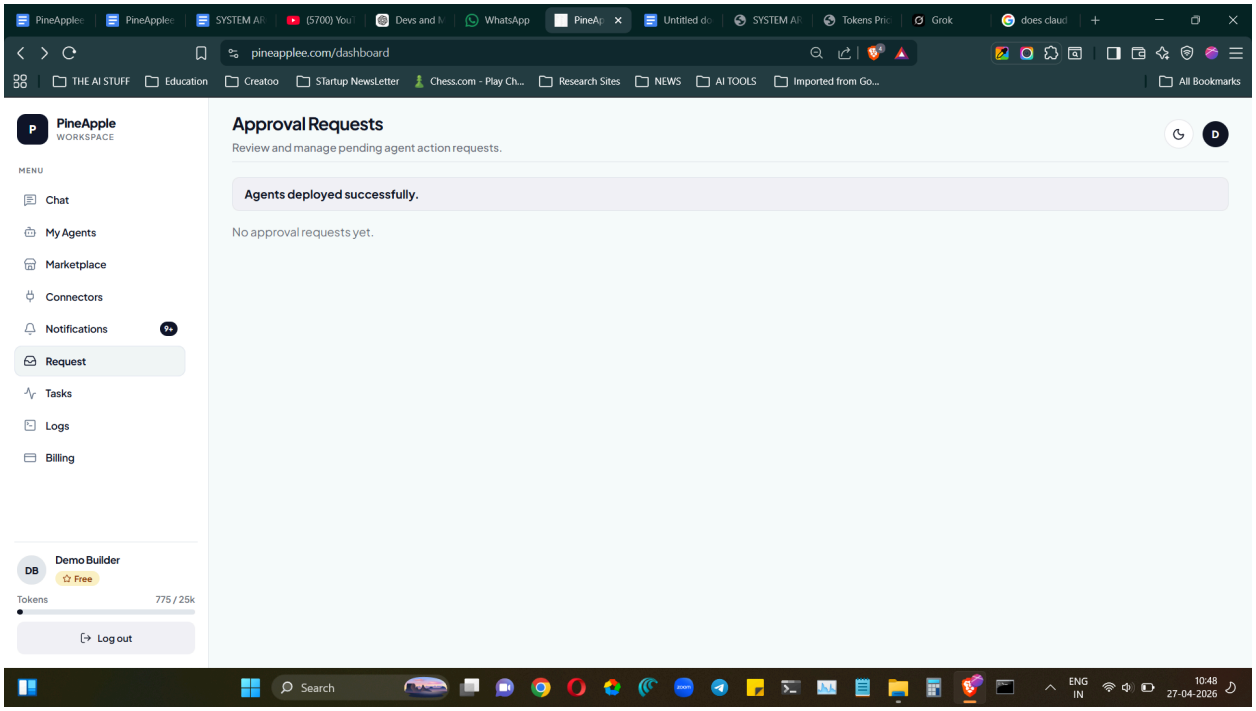
Also we have clearly mentioned that we need a pop up notification section which says safely deploy agents, so why this pop up is occurring ? we are not looking for system pop up, but our own pop up menu.



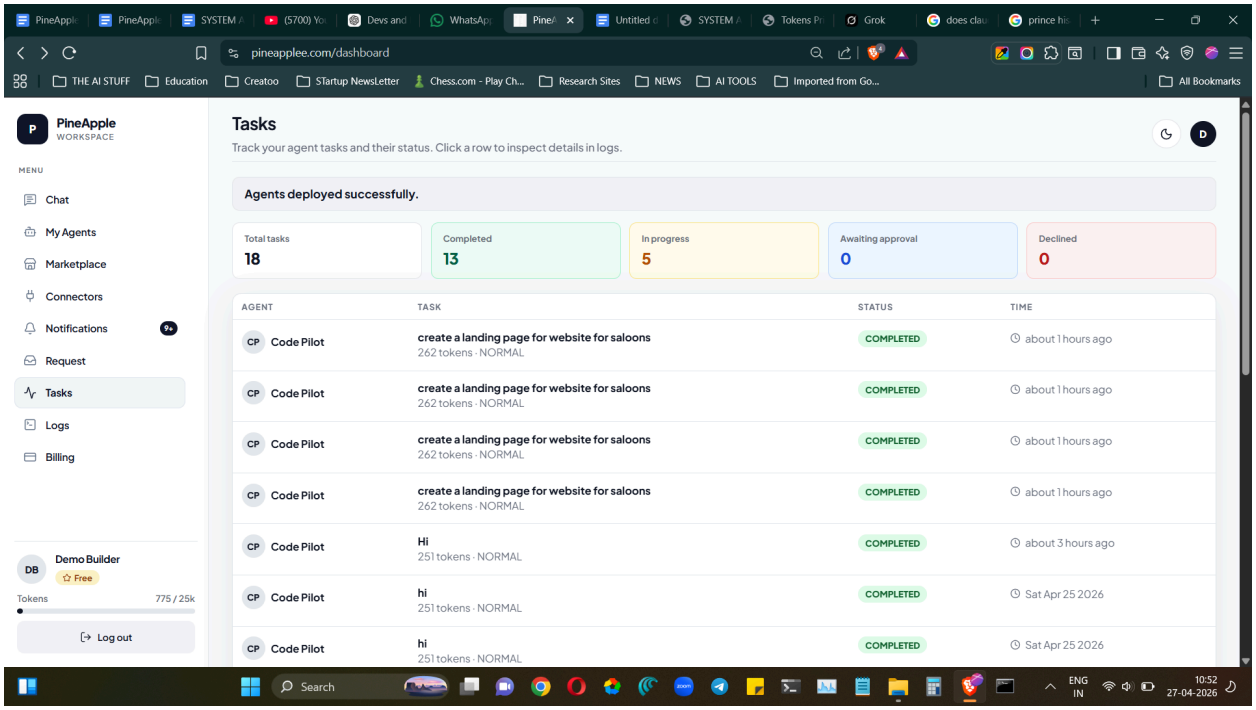
just add coming soon, no more other info on that, also the notification agents deployed need to be visible only to the section in Marketplace agents section and not in the other tabs.



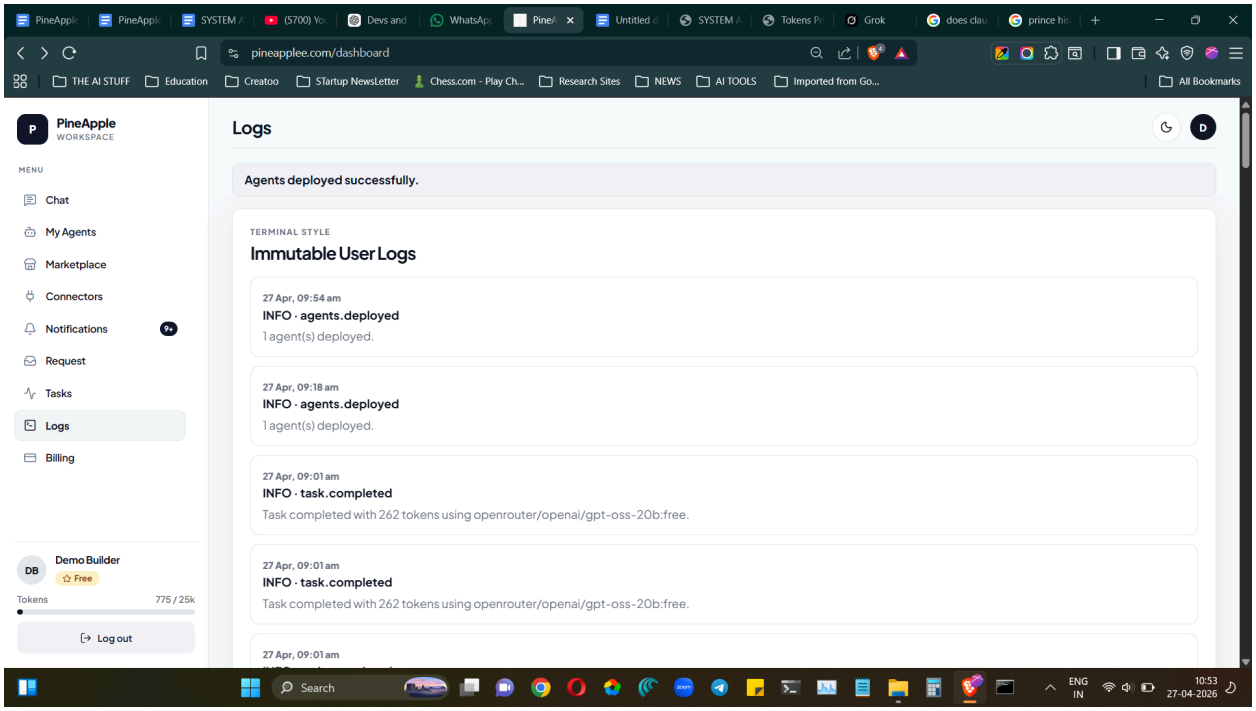
The notification section, it does not have read all section, neither do we able to read the notification the single one as well, so this needs to be working, not simple static one



need to see the demo of request section, also this agent deployed is coming everywhere so make it disappear from each pannel.



See page 32 33 of the doc shared, we want as it is, no changes in the design as we have shared and the whole alignment etc, this is good but we want the same as snapshot mentioned in the doc.



Same with the logs section, it should be in terminal style not a static design thing

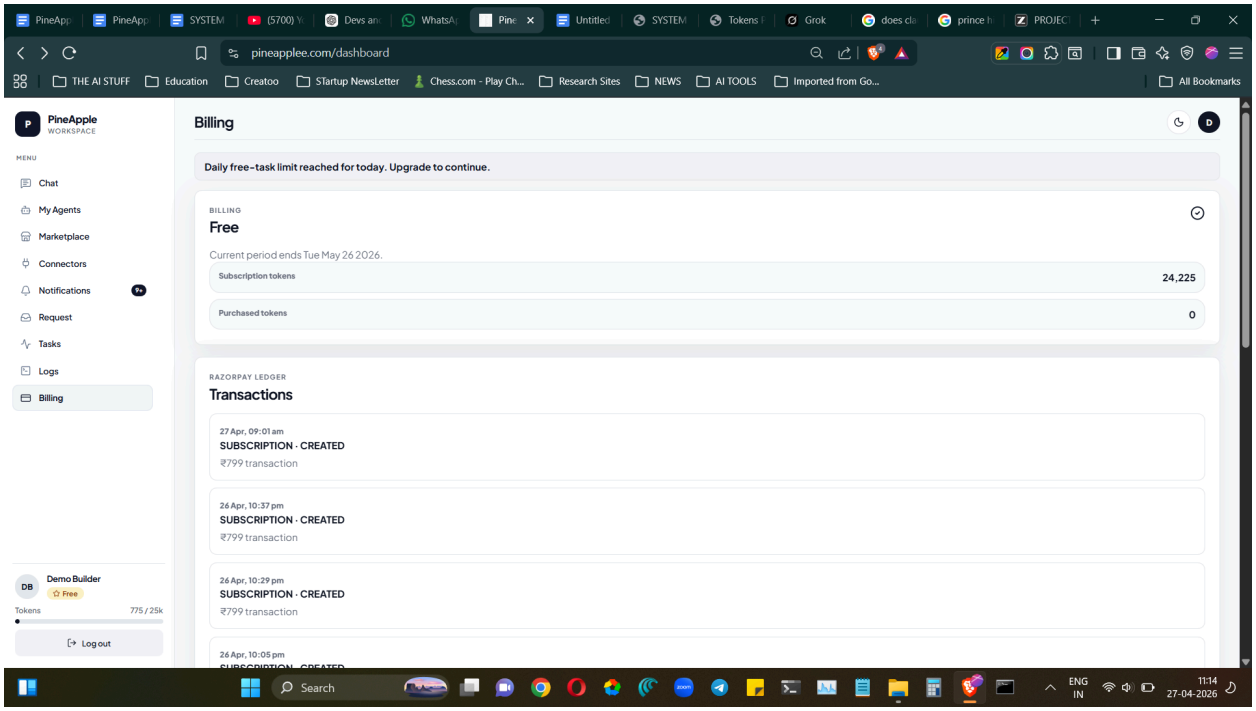
HTML

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Creative Startup Website</title>
  <meta name="viewport" content="width=device-width, initial-scale=1.0">

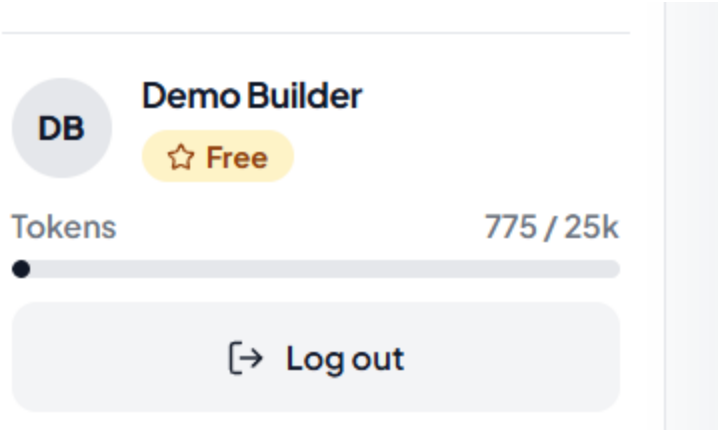
  <style>
    * {
      margin: 0;
      padding: 0;
      box-sizing: border-box;
      font-family: 'Segoe UI', sans-serif;
    }

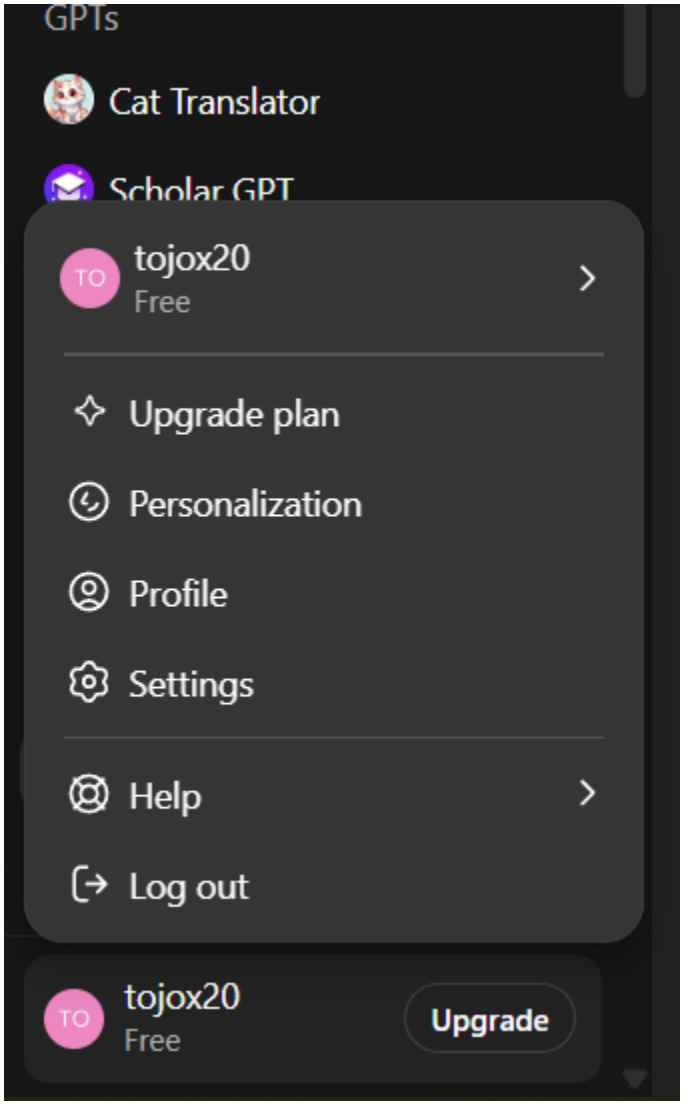
    body {
      background: #0f172a;
```

The logs should be appearing like this, as this is the code review thing, but this is just a reference, so we want logs to be added like this and not in the static form, you can even see the video that has been shared to you in the chats.

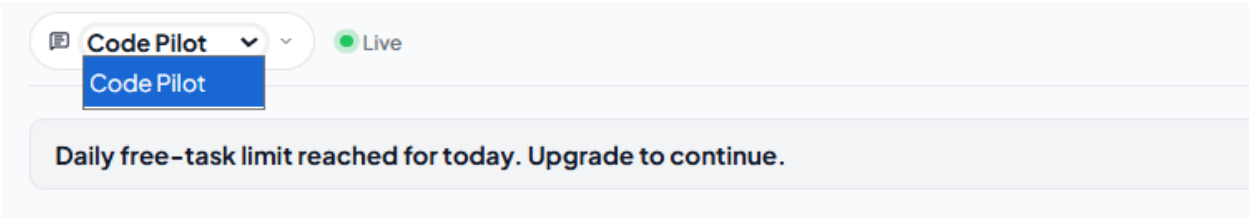


Billing section needs to have 2 sections, one would be for subscription and another one would be for Tokens, so that it would be clear what and where payment is flowing.





The profile section would be like this, it was clearly mentioned in the document that there would be a top pop up section which would have all these thing, so please make sure to make it happen. Including the logout button.



The UI needs work here, make it smooth with proper alignment (including the font overall)

The daily task limit reach needs to be in some reddish notification thing

If there is new session, then where i can see the new session ? I am unable to see the new session and the old session, it would be like the chats like we see in the AI Models, so please make sure that works. It was also mentioned in the doc instructions.

DISCLAIMER

These are the improvements, as this is only based on UI, as we are unable to test the coding thing due to limit, so we want to test that as well then only we can finalise the things ahead. The UI, the alignment, the design, the whole structuring needs heavy work and arrangements, until its done we cant move ahead with testing the ai agent. So there would be more coming changes in the project, other changes would be communicated ahead. (as the changes are not only limited to this doc)
