
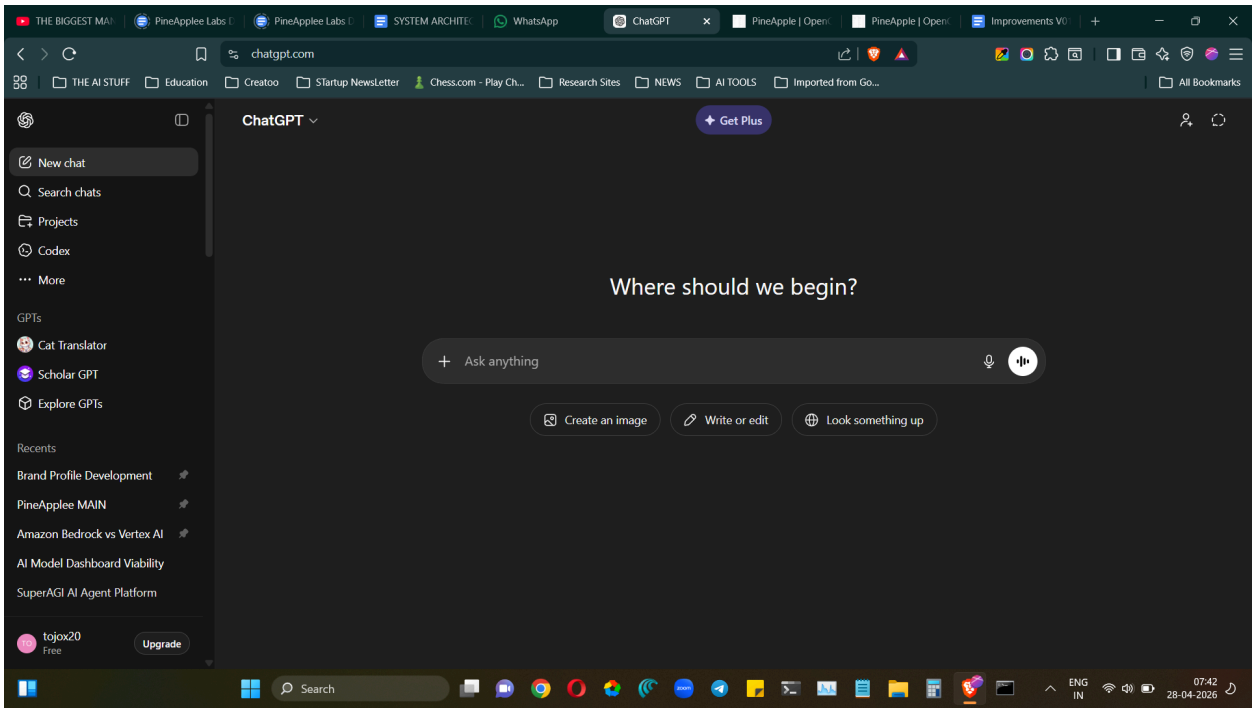
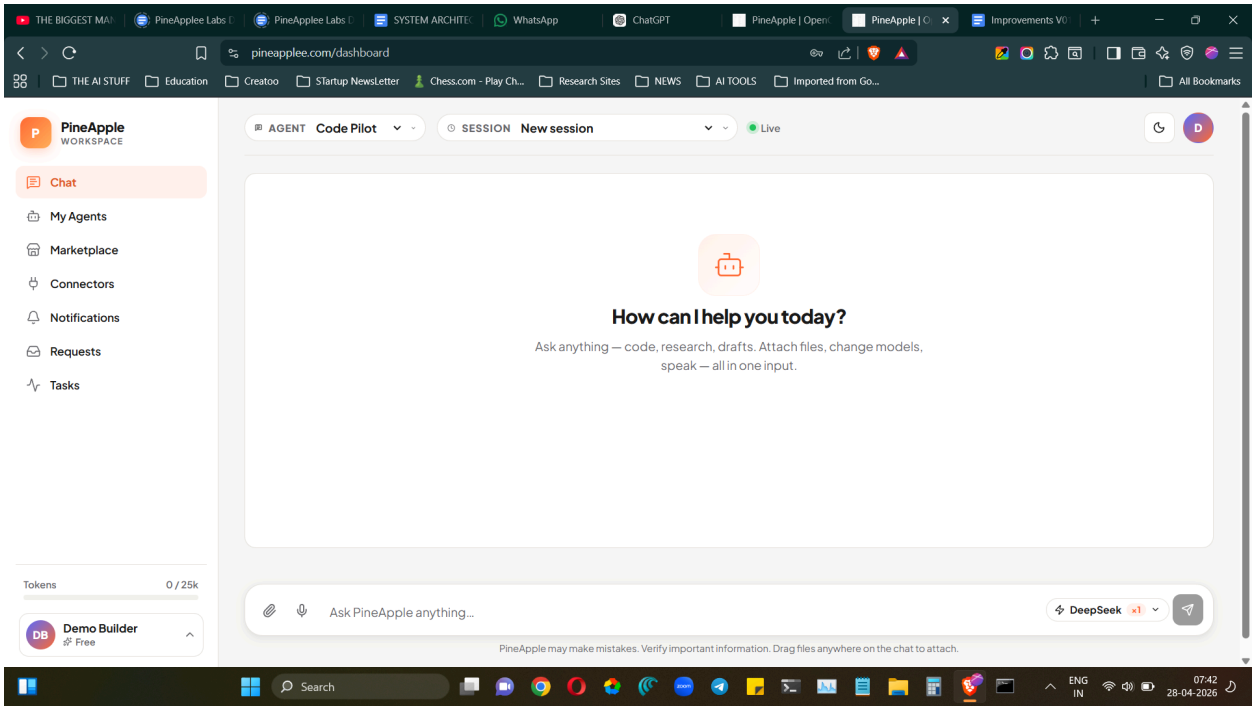
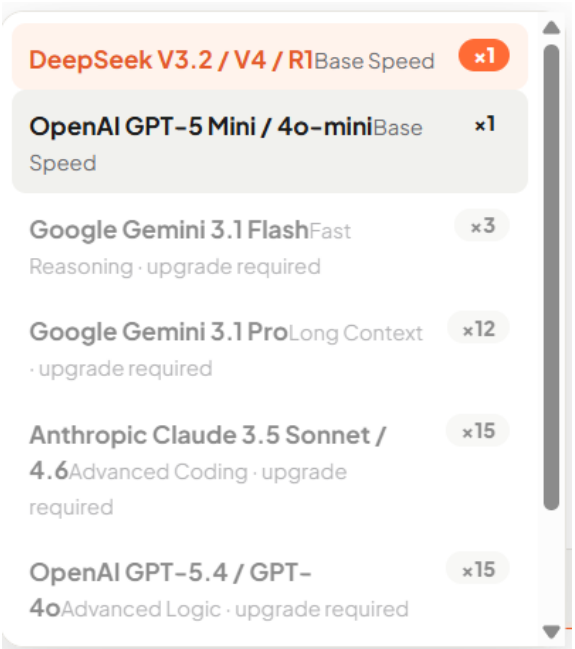
It was clearly mentioned, that there should be option for **Google Authentication**, and also if the user didnt logged in but still he can land on the dashboard but will unable to use it, as it will ask for Google Authentication. WHY THE THEME IS ORANGE, we have BLACK WHITE CREAM theme. FONT IS STILL SAME.



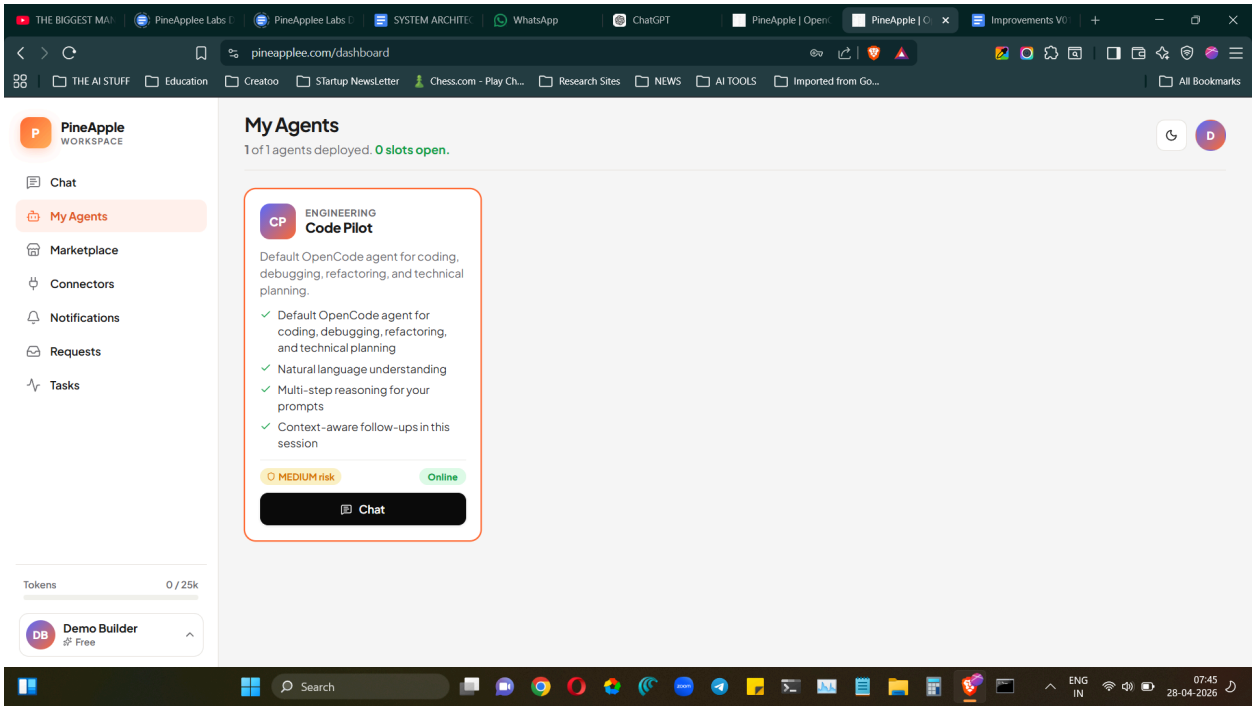
This is the site of ChatGPT, professional design, minimal looks etc, was told it will be pixel copied, but we can't see that into our dashboard.



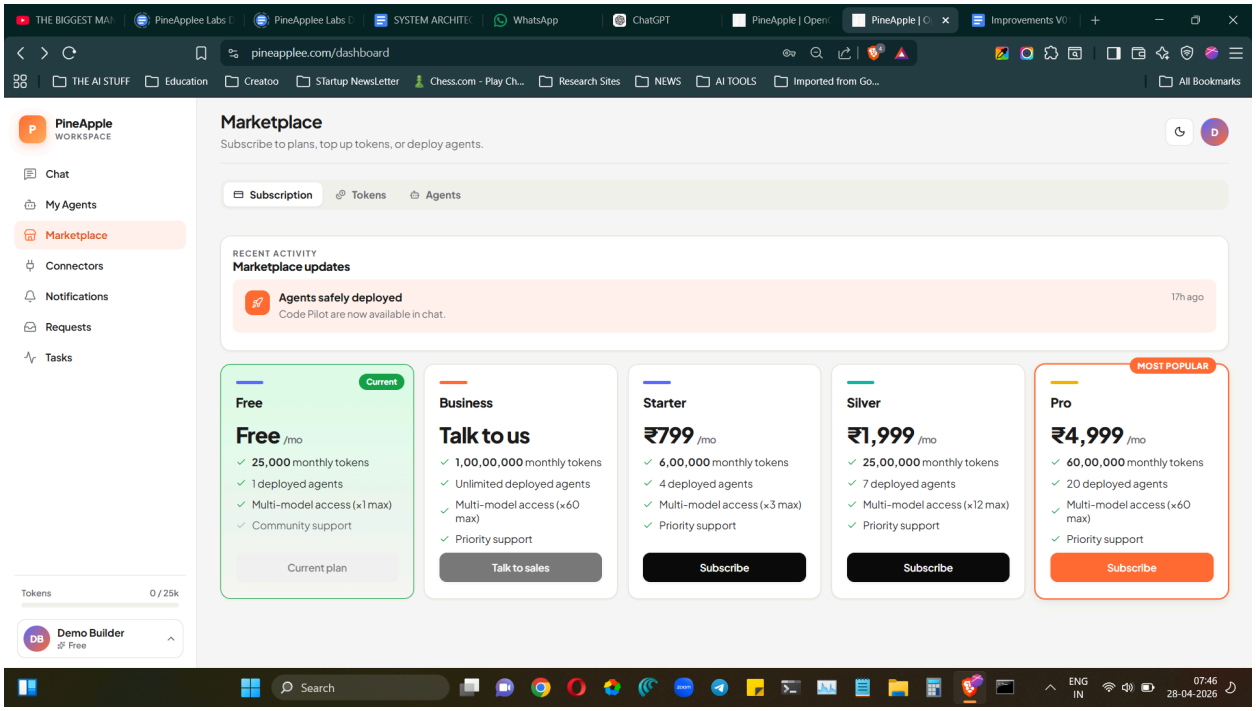
It was told the design would be done pixel by pixel, but in the both comparison images, we can't see the similarity. UI needs to be changed, still this looks vibe coded.



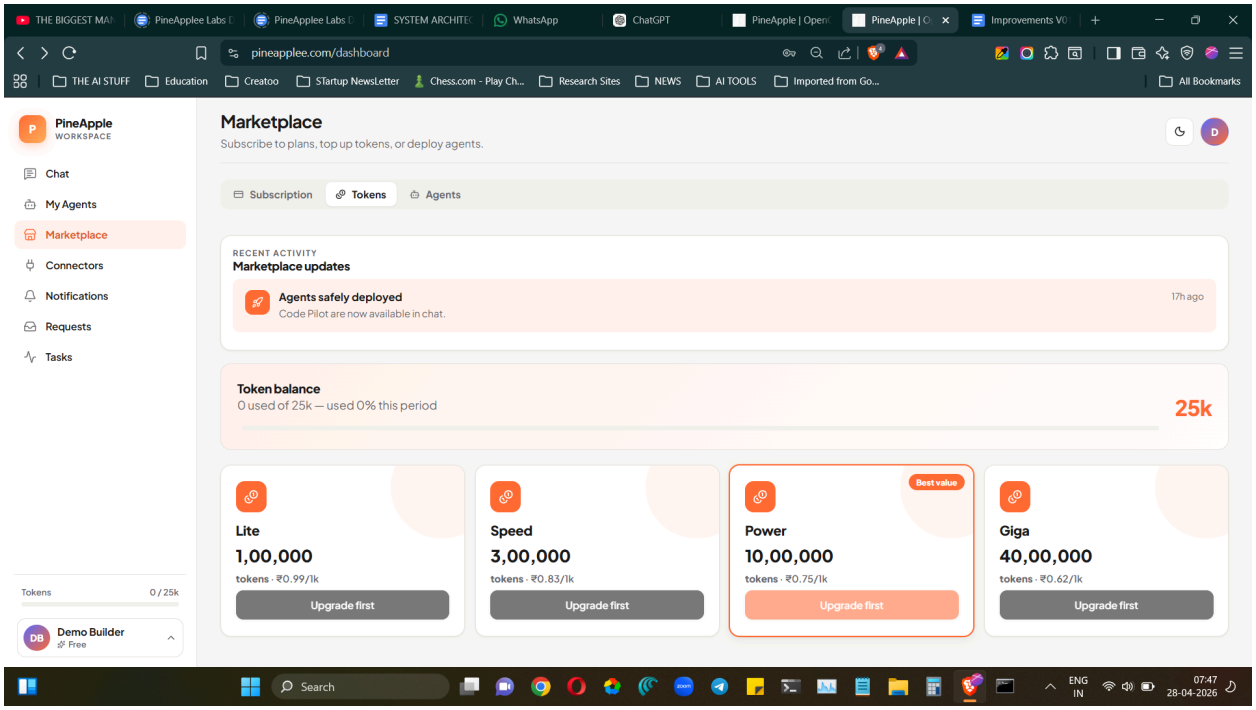
Here you can see, after DeepSeek V3.2 / V4 / R1 there is no space in Base Speed, and second all those 1x, x3 etc need to be removed.



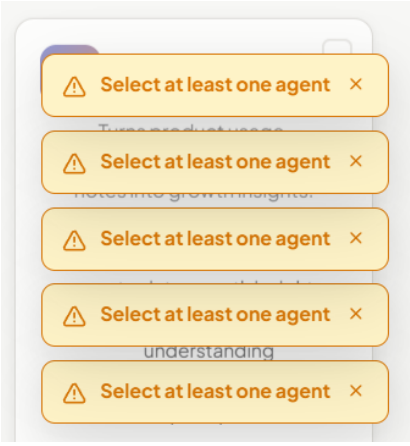
The tile design needs improvements, else we can move forward with that, I have shared the doc with designs but idk why it's not getting up to the mark.



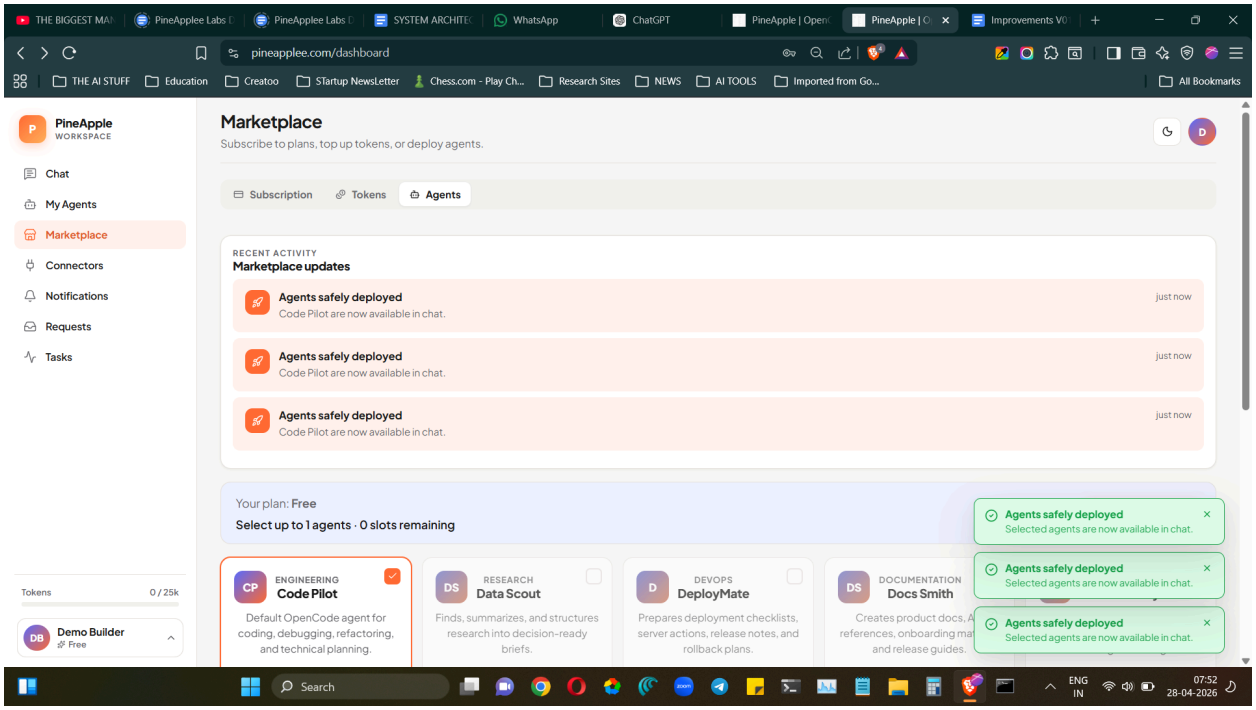
The tiles of the subscription looks very unprofessional in terms of designs, PLEASE REFER TO THE DOCUMENT THAT HAS BEEN SHARED.



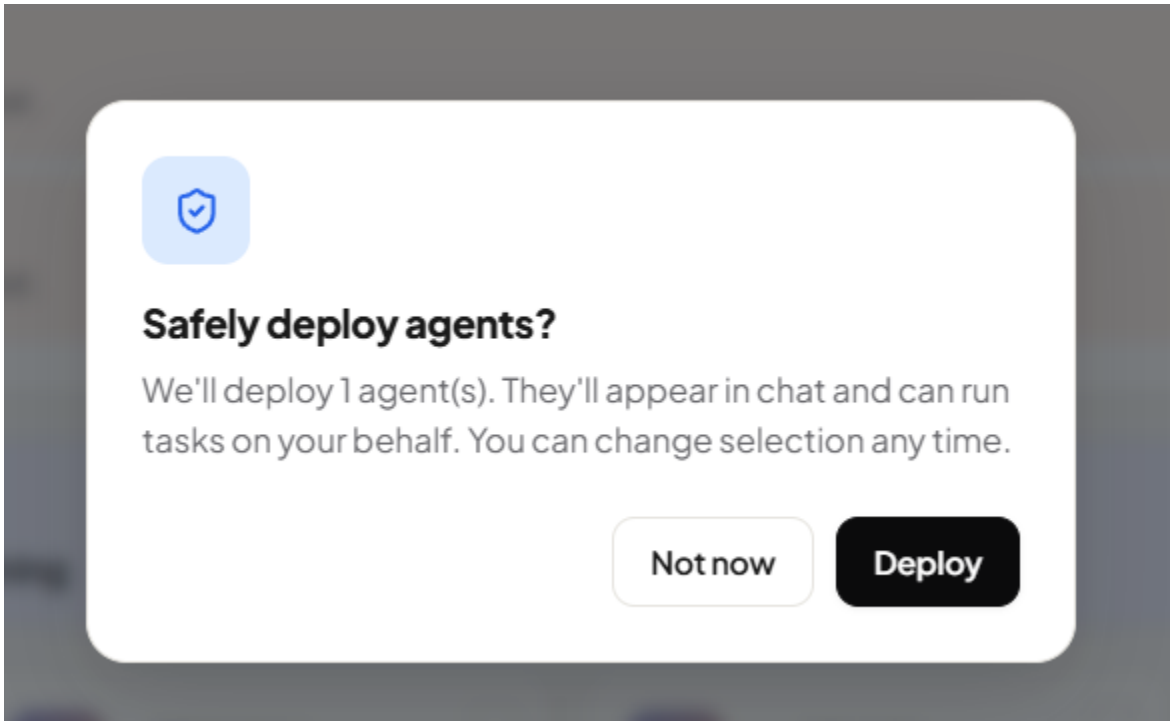
The tokens tiles design also needs changes, also the pricing is wrong, the sheet has been shared and small mistakes are happening again and again.



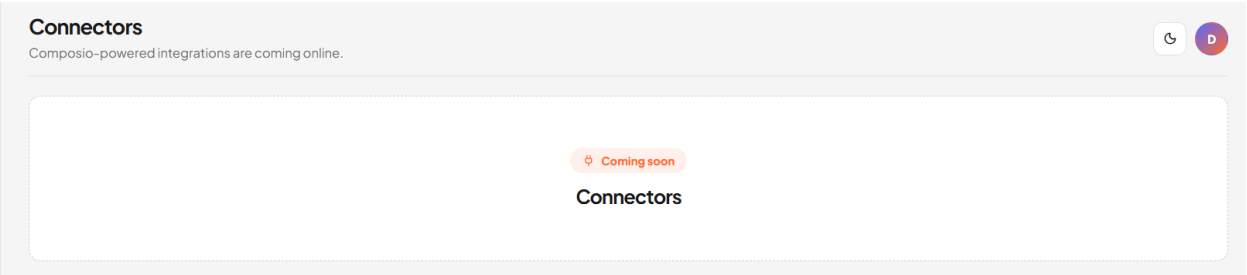
These errors should be in red, not in orange, Orange is not even our theme btw.



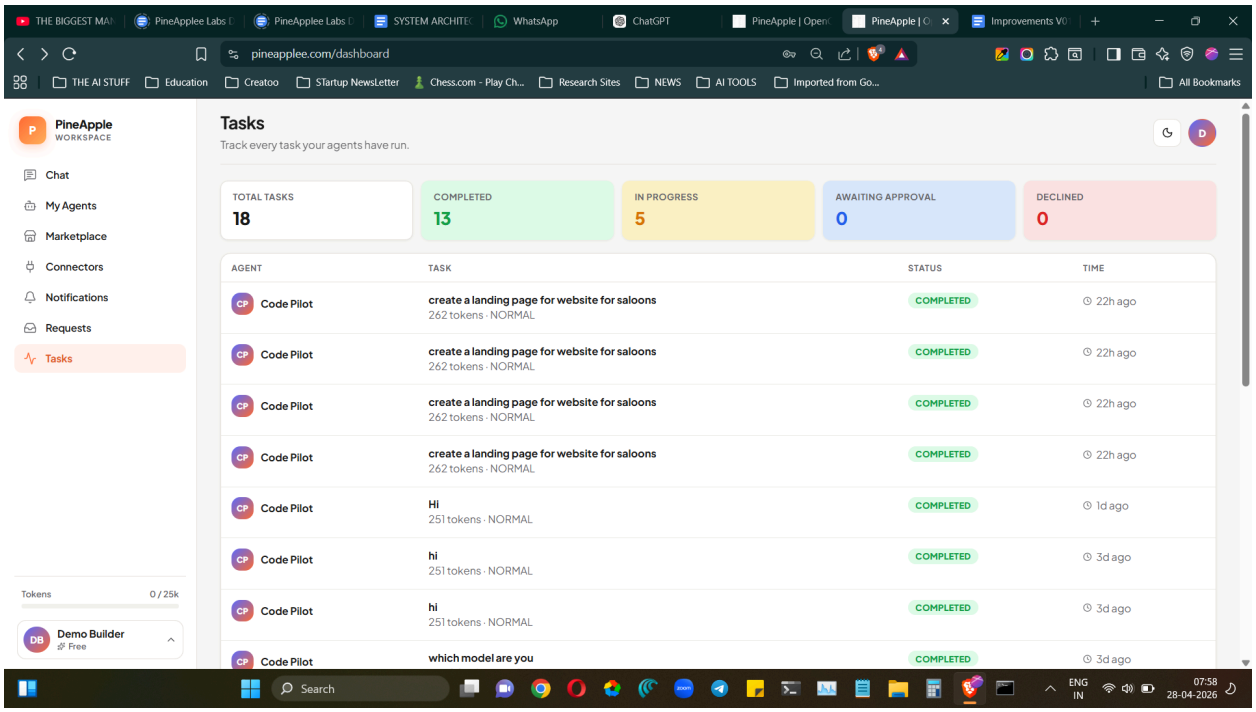
How is it possible that we are able to deploy same agent again and again



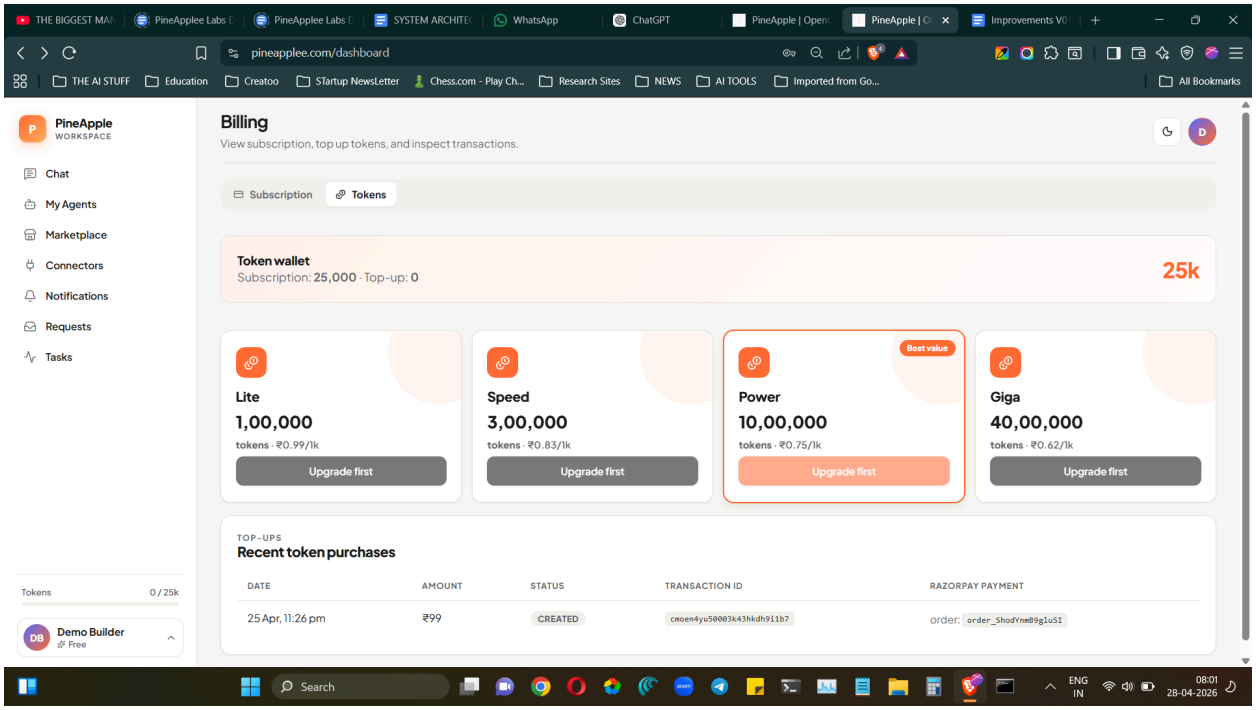
This section, the message needs to be updates, and also it was mentioned that there would be a summary appearing in the pop up, like what agents you have chosen, the caution message etc and then final deploy, this is a small pop up.



In the connectors, change the line that is written in the bottom under Connectors “Composio powerd etc etc”. Change that and leave it blank.



REFER TO PAGE 32 33 for the things how it is to be visible.



The pricing is incorrect, I have shared the sheet and pricing, still there is an error here

There is another change in the Live Status thing, but we are not going with that as its not that much important at the moment.

THE SYSTEM NEEDS TO HAVE SUB DOMAINS

chat.pineapplee.com
admin.pineapplee.com

For the chat window and for the admin panel, it was there but was not followed.
